

$A + B (t_c - t)^m$, $A = 1$, $B = -1$

$(t_c - t)^m \cos(\omega \ln(t_c - t))$, $m = 0.5$

$\ln p(t)$: the sum

— $m = 0.3$ — $m = 0.5$ — $m = 0.8$ — $\omega = 6$ — $\omega = 10$ — LPPL: $m = 0.5$, $\omega = 8$, $C/|B| = 0.08$
